DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 14 May 2004 has been entered.

Claim Objections

2. Claims 1, 14, 26, 36, and 39 are objected to because of the following informalities: "Venetian" is not a trademark and should not be capitalized. Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-4, 6-9, 12-21, 24-28, 31-33, 35-36, 38-41, and 44 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Marocco '857 in view of Stevens.

Marocco '857 discloses the invention substantially as claimed including a body (Fig. 24, 220) defining a head rail opening (Fig. 24, 230), two blind slats openings (Fig. 24, 226, 228), a bottom rail opening (Fig. 24, 230 (bold type)), a plate (Fig. 18, 246) with

Application/Control Number: 09/976,553

Art Unit: 3724

a head rail aperture (Fig. 18, 260) and configured to cut the head rail, a linearly movable blade assembly (Fig. 18, 244) to cut the bottom rail and the blind slats, a manually operated drive mechanism (Fig. 19, 262, 264) to cause the plate to cut the head rail and cause the blade assembly to cut the bottom rail and the blind slats concurrently and non-sequentially (col. 11, lines 24-47). However, Marocco '857 fails to teach a rotatable plate with a head rail aperture and configured to cut the head rail. Stevens teaches a rotatable plate with an aperture and configured to cut a rail (Fig. 4, D). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the device of Marocco '857 with a rotatable plate with an aperture as taught by Stevens to provide an alternative cutting mechanism.

Regarding claims 2, 3, 15, 16, 31, and 33, Marocco '857 teaches a blade housing (Fig. 24, 244), first blade for cutting the bottom rail having an open profile (Fig. 24, 254) along its cross sectional axis, second blade for cutting the blind slats (Fig. 24, 256).

Regarding claim 4, 17, and 32, Marocco '857 teaches a first blade (Fig. 24, 254) configured to cut a bottom rail having a closed profile.

Regarding claims 7-9, 19-21, 26-28, and 40- 41, Marocco .857 teaches a movable adjustable end guide adjacent to the body having an end guide lock (col. 11, lines 48-67).

Regarding claims 12 and 24, Marocco '857 teaches a profile of the head rail aperture (Fig. 24, 230) that corresponds to the cross section of the head rail.

Regarding claims 13 and 25, Marocco t857 teaches tooth-like projections (Fig. 16, unlabeled, in opening 204).

Art Unit: 3724

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Marocco '857 in view of Stevens as applied to claim 1 above, and further in view of Wang '557.

The modified device of Marocco '857 discloses the invention substantially as claimed except for a blade cutting the bottom rail along its long cross sectional axis. However, Wang '557 teaches a blade cutting the bottom rail along its long cross sectional axis (Fig. 4, 28, 241). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the modified device of Marocco '857 with a blade cutting the bottom rail along its long cross sectional axis as taught by Wang '557 to provide better cutting of the U-shaped parts of the bottom rail.

6. Claims 10, 22, 29, 34, and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marocco '857 in view of Stevens as applied to claim 1 above, and further in view of Wang '172.

The modified device of Marocco '857 discloses the invention substantially as claimed except for a support including at least one bracket and a first blade that is pointed for cutting the bottom rail. Wang '172 teaches a support including at least one bracket (Fig. 1, 45, 46) and a first blade that is pointed (Fig. 3, leftmost item 51) for cutting the bottom rail. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the modified device of Marocco '857 with a support including at least one bracket and a first blade that is pointed for cutting the bottom rail as taught by Wang '172 to provide easier cutting and workpiece handling.

7. Claims 11, 23, 30, 37, and 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marocco '857 in view of Stevens as applied to claim 1 above, and

Application/Control Number: 09/976,553

Art Unit: 3724

further in view of Marocco '388.

The modified device of Marocco '857 discloses the invention substantially as claimed except for a blind slats clamp. Marocco '388 teaches a blind slats clamp (Fig. 3, 74). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the modified device of Marocco '857 with a blind slats clamp as taught by Marocco '388 to compress the slats to provide cleaner cutting.

Response to Arguments

8. Applicant's arguments filed 14 May 2004 have been fully considered but they are not persuasive.

Applicants contend that Marocco '857 teaches blind components are cut progressively or sequentially. Applicants assert that the cutting of the head rail is completed by the time the blade for cutting the bottom rail is cutting the bottom rail due to a substantial gap between the blade for the bottom rail and the slot for the bottom rail.

The examiner respectfully disagrees. Although Figure 18 appears to show the gap as stated above, the specification (col. 10, lines 46-51) clearly indicates that Figure 18 shows the embodiment for cutting the bottom rail more or less simultaneously with the blind slats which are cut simultaneously with the head rail. It is noted that the drawings are not to scale since the disclosure is silent as to dimensions.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Liebig et al., Dvorak, and Marocco '120 are cited to show related devices.
